

Supply Chain Management

Bachelor's in Supply Chain Management, Supply Chain Information Systems or Logistics

Popular rotations may include:

- **Supply Chain Optimization / Information Systems:** Our supply chain planning team balances production, purchases, energy costs and transport costs to maintain sufficient inventory and meet dynamic customer demands. The team has Optimization and Data Analysts who are responsible for maintaining current operational cost inputs and demand forecasts to support decision making by the Supply Chain Planning Managers. Support is also provided through development of improved data visualization and automation for quicker, better decisions.
- **Operational Cost and Performance:** Through detailed analysis of actual cost and key performance indicators, the Operational Cost and Performance Analysts identify and track opportunities for efficiency improvements. They are responsible for tracking all major categories of fixed and variable costs, building operations' budget and reforecasting according to the latest cost structure information.
- **Scheduling / Transport Systems:** This team is responsible for all applications / technology used in our trucks and by our distribution team. They work with internal developers and external cloud / SAAS providers to create the user experience for drivers, managers and the National Scheduling Center. This includes investment approval, system design, testing, administration, training and ongoing user support.
- **Central Transport Management:** This team is responsible for continuously optimizing Messer's network of driver and equipment resources. The Distribution Process Analyst will create and implement data driven solutions for last mile optimizations, reduced fuel consumption / cost, balanced cost / customer service in compliance with applicable safety standards. Support is also provided through developing solutions to problems / constraints, inventory gaps and execution of Standard Operating Procedures.
- **Product Management / Sales Performance:** Managers are responsible for strategic capacity investments for all liquid products, managing product sourcing, competitive relationship management and overall product line profitability. This team provides direct input to product pricing targets, implementing cost recovery mechanisms and tracking new / lost business.
- **Finance:** Help steer the business to maximize profitability through planning, forecasting and detailed analysis of financial results. Financial analysts liaise with several business functions to understand macro- and microeconomic impacts on the company's results and provide guidance to senior management. Typical work outputs comprise cost variance analyses, price, volume and mix calculations as well as price-cost assessments.
